SUMMARY

Full Stack Developer working mainly in TypeScript, with 1.5 years as a Functional Analyst at Grupo OSDE. I build and maintain production applications end to end: data model, APIs, frontend, automated testing and deployment. Working in healthcare taught me to diagnose issues at the database level, work through requirements with business stakeholders and validate before every release.

TECHNICAL STACK

Frontend: Angular 17 (Signals, RxJS), React, Next.js, Vite, Tailwind CSS, PWA, Capacitor
Backend & APIs: Node.js, Express, REST, Vercel Edge Functions, JWT • TypeScript, JavaScript, C#, Python
Data: SQL Server (stored procedures), PostgreSQL / Supabase, MongoDB
Testing & DevOps: Playwright, Vitest, Postman, Git, CI/CD, Vercel, Azure DevOps
Applied AI: Google Gemini API, Claude Code, GitHub Copilot

PROFESSIONAL EXPERIENCE

Functional Analyst — URG Urgencias • Grupo OSDE • Córdoba, AR Dec 2023 – Mar 2025

- Diagnosed production incidents in SQL Server, tracing stored procedures and operational data to isolate root causes before escalating to development.
- Consumed and validated REST APIs with Postman (responses, errors and edge cases) as part of pre-release testing.
- Took part in migrating a monolithic system to microservices, covering functional analysis and validation of the migrated services.
- Worked with the RPA team on an automation deployed across 5 medical centers that records patient attendance and syncs it to internal systems.

PROJECTS

Independent & freelance development • Oct 2023 – Present

Web Quoting Tool — **Playa y Sol S.A.S.** Next.js • TypeScript • Supabase • Playwright In production

- Built the company's quoting tool for 5 product lines (pools, linings, covers, fencing and tiling), each with its own pricing logic, role-based users and per-client history.
- Implemented PDF and Word quote generation and covered critical flows with Playwright end-to-end tests, with continuous deployment on Vercel.

NutriPlan (FoodGuide) Angular 17 (Signals) • Capacitor • PWA

- Developed a diabetes-focused nutrition guide with Signals-based reactive state, packaged cross-platform with Capacitor.
- Integrated Open Food Facts with a barcode scanner and resilient local persistence so the app keeps working offline.

Rincones React • Node.js / Express • MongoDB • Gemini API In production

- Designed a MERN app with its own REST API and JWT auth; integrated Gemini to read wine labels from photos (OCR), with local OCR as a fallback.

DollarTracker React • Vite • Vercel Edge Functions

- Implemented an Edge Functions proxy that caches Twelve Data responses at the CDN to cut quota usage on the external API.

Dividimos? Angular 17 • Offline PWA • lz-string

- Built a backend-free PWA for splitting group expenses: state is compressed with lz-string and carried in the URL, so a group shares its tab with a single link.

EDUCATION

Information Systems Engineering — UTN FRC Coursework completed • Thesis approved • Final exams in progress
B.Sc. in Information Security — UTN In progress

LANGUAGES

Spanish (native) • English (B2, fluent conversational)
